

Starting at top edge of this paper wrap around a plastic straw to create a cylinder the straw can slide in and out of, tight but not too tight. Glue a bit when starting to wrap it and at the end this will be the body/fuselage of the plane.

Next cut/fray one end and bend the frays back apply glue to the inside of the frayed portion and attach nose cone here, pushing it back over the frayed part.

From the top of page until here should be lots to make the cylinder

Roll corners to create a cone. Trim as necessary

Attach wings to body.

When all is dry, insert straw into cylinder and blow through the end sending the plane off.

Fold here and cut 2 wings

https://youtu.be/MQwAczioN_Q

Fold along dotted line and attach to fuselage
